10. Insert the yellow hose from the bottom circular hole of the rod into the top water outlet hole and pull it out

11. Connect the brush and hose joint

12. Adjust the brush and telescopic rod for angle adaptation

## Product Introduction:

As a handheld manual cleaning brush, this product is widely used in cleaning scenarios such as solar panels and high-altitude glass. The product offers a variety of carbon fiber telescopic rods length options for 7.5/12/15m, combined with a 50cm long brush head and tough bristles, which can effectively remove stubborn stains without damaging the panel, making cleaning more efficient and safe.

## Use Process:

1. Connect the telescopic rod to the brush head and adjust to appropriate brush head angle.
2. Connect the water supply system (directly connect the water pipe to the faucet or connect the water pump to the water bucket).
3. Adjust the length of the telescopic rod and hold it to achieve long-distance operation.

## Warranty Coverage:

For water pump, power supply electrical components, we provide 1-year warranty.

Hardware, plastic parts, and water pipes are not covered by the warranty.
